Hi Jenny,

I just realized you did not get this email. See below and attached.

Subject: Timeline Summary of How Oregon's Additional Management Measures for Forestry Came To Be

All,

I have concluded my review of EPA HQ program office historical paper files for Oregon's CNPCP under CZARA. The purpose of this review was to uncover the history of how NOAA and EPA came to impose specific additional management measures for forestry on Oregon's CNPCP. My detailed findings are attached and are summarized in the following paragraph.

The record shows that there was no mention of the need for additional MMs for forestry in Oregon until September 1996. The file also shows that the push for Oregon to include additional MMs for forestry was a direct result of information provided to the federal partners by NMFS, which was working at the time with Oregon to establish the Coastal Salmon Restoration Initiative (CSRI). The final draft Oregon Coastal Nonpoint Program Findings and Conditions from January 1997 includes a requirement for Oregon to establish additional MMs for forestry and recommends that Oregon work with NMFS to address priority issue" identified by NMFS in the development of these additional measures. Rather, in January 1998, the federal partners publicly released the Findings for Oregon Coastal Nonpoint Program which require additional management measures for forestry to address certain areas of concern identified by EPA and NOAA (which are identical to the concerns previously identified by NMFS).

The memo summarizes in chronological order the record of how Oregon's additional MMs for forestry came to be.
